

On June 10th, Cancer Pathways hosted a professional development webinar for those who wanted to learn more about our Cancer Happens® Teen Education program, which we provide at no cost to the community, and discussed how to most effectively implement it at schools and within organizations. We discussed the importance of cancer education and risk reduction education designed for youth as well as general cancer knowledge. Participants were able to preview the online course and view all materials.

If you were unable to make the live event, that is okay! We recorded the event and [posted in our webinar library](#).

As we wrap up the spring semester for students and teachers, we are preparing for our wave of summer online learners. Our eLearning course and materials are available throughout the summer for those that need to make up credit or have decided to take additional courses. Email our program manager Jana, jana@cancerpathways or [register online](#).
